

MCNCOIN - CYPRUS – Update

FORESTIO LIMITED, registered in Cyprus, is pleased to inform all its partners and investors that the MCNCOIN token, a recognized brand under European jurisdiction, is rapidly expanding its presence across multiple continents and gaining significant popularity.

MCNCOIN provides its holders with various opportunities, including participation in crowd sales, earnings from airdrops, trading, staking, and engagement with high-tech, innovative projects.

MCNCOIN has made history as the first cryptocurrency from Central Asia to be successfully traded on prominent platforms such as "Coinsbit," "CoinW" (ranked among the top 26 crypto exchanges), and "Mexc," which boasts a high trust rating and a 24-hour trading volume of \$1.95 billion USD.

The tokenomics of MCNCOIN is built upon innovative features that prioritize privacy, security, and efficient cross-border transactions. Users can deposit, withdraw, and exchange both cryptocurrency and fiat currencies seamlessly. MCNCOIN enables instant transactions without account blocking or intermediaries (such as banks), eliminating fees for international transfers or commissions. Opening an account takes just seconds, offering global access 24/7. Using some of the world's fastest blockchain platforms, MCNCOIN facilitates swift, secure transactions with robust privacy protections.

Security is a top priority for the MCNCOIN platform, which operates with three layers of security: systemic, infrastructure, and organizational/financial measures. This structure makes the system highly resistant to hacking attempts. Additionally, the number of nodes in MCNCOIN's blockchain network significantly surpasses that of other platforms, providing enhanced resilience to DDOS attacks.

MCNCOIN's innovative economic model ensures the safety of investments even during economic crises, natural disasters, or geopolitical tensions.

The demand for MCNCOIN is already strong in the real world, with 120,000 holders and growing. Following its transformation into a stablecoin, the token is expected to attract even more users. The MCNCOIN team is preparing special conditions for these users, such as the issuance of MCNCOIN coins on credit, collective loans through crowdloans, and the utilization of bond mechanisms.

Limited Document No 001-24 2024-09-15

Having successfully tested its capabilities on international trading platforms, MCNCOIN is now applying on major exchanges like ByBit for a listing (IEO), one of the world's leading exchanges. Once listed, MCNCOIN will be converted into a stablecoin, backed by USD. This conversion will:

- Minimize risks for investors while creating an interconnected, mutually beneficial stablecoin ecosystem.
- Maintain MCNCOIN's price stability, ensuring the security of investors' funds.
- Position MCNCOIN as a reliable tool for long-term fund storage, as it will be free from the volatility typically associated with cryptocurrencies like Bitcoin.

In pursuit of technological advancement, MCNCOIN has signed an agreement with an international IT corporation to develop its own fifth-generation blockchain. Upon launch, the MCNCOIN stablecoin will serve as a settlement currency within this new blockchain.

These milestones will contribute to the creation of a unique crypto ecosystem centered around MCNCOIN, which will stand out not only in scale but also in its unity of purpose and mutual support among its community members.
